Professional profile

Backend developer with more than 2 years of experience building web applications with Python, Django and Spring Boot. I focus on REST APIs, databases and well-tested code. I have designed multi-tenant SaaS products running in production, automated data imports and supported programming students as a technical support agent. I am studying Systems Engineering, work remotely and am open to employment opportunities.

Technical skills

Languages: Python, Java, SQL, JavaScript, TypeScript, HTML, CSS

Backend and APIs: Django, Django REST Framework, Spring Boot, REST APIs, JWT authentication

Databases: PostgreSQL (Row Level Security, GiST exclusion constraints), MySQL, MongoDB

Frontend: React, Next.js, Vue, Tailwind CSS

Testing and tools: pytest, JUnit, Postman, Git, GitHub, Docker, Jira, Confluence, Slack

AI tools: Claude Code, Codex, Antigravity

Other: On-page SEO, Google Search Console, Google Analytics, Excel

Professional experience

Customer Support Agent · Python code review — TripleTen (remote)
Mar 2024 – Present

- I provide technical support to programming students, resolving questions and blockers in their projects.
- I review Python and SQL code, identify errors and propose clear solutions.
- I guide each student through their learning process so they understand the reasoning behind every solution and overcome their technical blockers.
- I handle reports on how the learning platform is performing.

Tools: Python, SQL, Jira, Confluence, Slack, Discord, Claude Code, Codex, Antigravity.

Data and Web Presence Developer (professional internship) — IngeniaLink S.A.S.

Aug 2026 – Present

- Unified three Excel templates for RFID tag registration into a single format, with validation and automatic import into the cloud database.
- Built an API to register sold tags by barcode and update the information in real time.
- Optimized the traceability database and the reconciliation process so the client can run it independently.
- Improved the corporate website with content on RFID and Industry 4.0, frequently asked questions, on-page SEO and a sitemap, tracked with Google Search Console and Analytics.

Tools: SQL, APIs, Excel, HTML, CSS, SEO.

Founder and Full-Stack Developer — PEVLYN (pevlyn.com)

- My own brand, through which I build websites, systems and automations for micro and small businesses.
- Responsible for the brand identity, the corporate site and the delivery of client projects.

Featured projects

PEVLYN Agenda · Multi-tenant SaaS for appointment and booking management (agenda.pevlyn.com)

- Decoupled architecture with a Django REST Framework API and a Next.js 15 frontend, with per-tenant data isolation through Row Level Security in PostgreSQL.
- Availability engine with GiST exclusion constraints (btree_gist) that prevents race conditions and guarantees zero overlapping appointments at the database level.
- Service-Selector pattern to separate business logic from HTTP controllers, backed by more than 150 automated tests (unit, integration and isolation).
- Public booking with cryptographically signed links and transactional email delivery with Resend.

Technologies: Django, Django REST Framework, PostgreSQL, Next.js 15, TypeScript, Vercel.

Clínica Daniel Rivera · Website and clinical management system (clinicadanielrivera.com · code)

- REST API on Django REST Framework with JWT authentication and modules for patients, services, medical records and public booking.
- JavaScript frontend consuming the API, with technical SEO (JSON-LD, Open Graph) and accessibility through ARIA.

Technologies: Django REST Framework, JWT, JavaScript, HTML5, CSS3, Vercel, Render.

PEVLYN · Corporate website (pevlyn.com)

- Site built with React, Vite and Tailwind CSS, with a validated lead capture form, a direct WhatsApp channel, SEO and Open Graph.

Education

Systems Engineering — Universidad Francisco de Paula Santander, Cúcuta, Colombia
